Dear OM

Your letter at hand and appreciate your Spirit in expressing your thanks for the Rectobulb.

We feel that we are the ones to be grateful as we believe that you fellows will need just such a Rectifier tube and are happy to know that you had a chance to get acquainted with it at close range.

We are a young and strug ling concern but thru our policies we hope to ultimately grow and some day be on a paying and maybe a money making basis: it is the policy that costs money because we had to take the bull by the Horns and make a start: in making the start we had to turn out a product that was far from perfect: our policy was to replace any defective or unsatisfactory tube that was turned out : this we did: result was we groaned at the cost but worked like the Dickens to make a better product.

THe thing has worked out OK and we are going strong yet: we are sure that we are turning out the best Products in our Line Par none and we will appreciate a good word from every Ham in your organization.

We kind of feel that we are Martyrs to the Ham Game and trying to produce for the Ham something that is low priced and efficient and that delivers value received.

Therefore, why not your good will and cooperation?

Wishing your gang the best of luck and success we are

Very truly yours
